

Sriya Shanku

📍 Hyderabad, India ✉ sriyashanku@gmail.com 💻 sriya-shanku 🌐 sriyaShanku

PROFILE SUMMARY

Aspiring CSE (AIML) engineering student with experience in building RESTful APIs and database driven applications. Strengthening skills in Data Structures, Web Development, and Machine Learning with a solid understanding of core CS concepts. Passionate about using technology to solve real-world problems through internships, freelance projects, and hackathons.

EDUCATION

Sridevi Women's Engineering College , Hyderabad	2023–2027
Computer Science and Engineering (AIML) Percentage: 87%	
Shree Akshaya Junior College , Sangareddy	2020–2022
Intermediate MPC Percentage: 87%	
Karuna High School , Sangareddy	2020
SSC CGPA: 10	

SKILLS

- **Programming Languages:** Python, Java, C, JavaScript, React, Node.js
- **Computer Science Fundamentals:** Data Structures & Algorithms, OOP, OS, DBMS, Software Engineering
- **Web & Application Development:** RESTful APIs, MVC architecture, Frontend-Backend integration
- **Databases:** MySQL, PostgreSQL, MongoDB, schema design, query optimization
- **Machine Learning & Data :** Data preprocessing, exploratory data analysis, Training ML models
- **Tools & Technologies:** Git, GitHub, Docker, Postman, VS Code
- **Systems & Cloud :** Linux fundamentals, containerization, deployment workflows
- **Professional Skills:** Problem-solving, communication, analytical thinking, teamwork, documentation

PROJECTS

RetailSight AI – Demand Forecasting System for Retail Inventory Management 🔗 Jan 2026

Tech Stack: Python, XGBoost, Prophet, MongoDB, React.js, FastAPI

- Implemented an end-to-end demand forecasting system to predict future retail product demand using historical sales data, seasonal trends, and temporal patterns.
- Developed and tuned a hybrid XGBoost + Prophet pipeline, resulting in approximately 25% higher forecasting accuracy compared to traditional moving-average methods.
- Applied predictive insights to support inventory planning decisions, helping reduce stock-out risk by ~20% and minimize excess inventory by ~15%.

Product Price Prediction 🔗 Oct 2025

Tech Stack: Python, PyTorch, BERT, ResNet50, XGBoost

- Constructed a multimodal deep learning pipeline that combines product titles, images, numeric IPQ signals, and structured attributes for accurate price prediction.
- Integrated contextual text embeddings from DistilBERT with visual feature representations from ResNet50 to improve model understanding of product characteristics.
- Implemented robust preprocessing, feature alignment, and fusion layers to ensure consistent training.
- Performed 5-fold cross-validation and achieved SMAPE of 12.47% and $R^2=0.91$, outperforming baseline single-modality models.

MiniBiz - A Door to Small Scale Business 🔗 May – June 2025

Tech Stack: HTML, CSS, JS, Node.js, MySQL

- Created a full-stack web marketplace supporting 20+ product listings with secure authentication, role-based access, and seamless cart and checkout workflows.
- Implemented multiple REST APIs and optimized MySQL queries, improving data retrieval performance by ~35% while enabling scalable catalogue growth and responsive user interactions.

CERTIFICATIONS

- Gen AI Workshop (IIT HYD)
- Data to Intelligence: ML & DL in Action (NextEra UniTech)
